

# GRASS / VEGETATED SWALE - Site Plan

 Roof area contributing to tank  
 Stormwater pipe

Provide a grated drain on the driveway to direct stormwater to swale. If site conditions prevent this, Council may accept runoff being directed to adjoining landscapes with a 1-2% crossfall.

Use the small scale stormwater tool (S3QM) to determine the length and width of the swale. The measurements specified in the tool should be shown on the plan and the S3QM certificate must be submitted with the DA
